Education

Information Technology 2023 - Present

Thang Long University

GPA: 3.2/4.0

Skills

PROGRAMMING LANGUAGES

- Java (Core, OOP)
- C# (.NET)
- Python, C/C++
- SQL
- HTML, CSS, JavaScript

BACKEND & FRAMEWORKS

- Spring Boot (Security, JPA)
- .NET (.NET Core, WinForms)
- RESTful APIs
- MySQL, SQL Server, SQLite
- Maven, Gradle

SYSTEMS & DEVOPS

- Linux (Ubuntu Server)
- Git & GitHub
- Docker
- CI/CD (GitHub Actions)

Objective

Final-year Information Technology student with practical experience in backend engineering (Java Spring Boot, C#/.NET), relational databases, and Linux deployment (Docker, CI/CD) Proven ability to deliver production-ready web platforms and automated systems. Eager to contribute to scalable software solutions and high-performance engineering teams as a Backend Developer Intern / Fresher.

Projects

Fullstack Developer Oct 2026 - Present

BookHub E-Commerce & Bookstore Platform (Java Spring Boot)

• Architected a full-stack e-commerce system with a Java Spring Boot RESTful API backend and React frontend.
• Secured API endpoints using Spring Security and JWT; implemented Role-Based Access Control and input validation.
• Built core e-commerce workflows: catalog filtering, cart, order processing, and transactional persistence via Spring Data JPA.
• Automated continuous integration and deployment (CI/CD) with GitHub Actions and Docker onto an Ubuntu Linux VPS.
• Tech Stack: Java 21, Spring Boot 3 JWT, JPA, MySQL 8, Docker, CI/CD.

Lead Developer Dec 2025 - May 2026

Store Management System (.NET)

• Architected a multi-tier store management application handling product inventory, sales transactions, supplier records, and invoicing.
• Integrated relational database storage with optimized SQL queries and LINQ expressions, ensuring transactional ACID properties across multi-item checkout operations.
• Built Role-Based Access Control for operational security and automated statistical reporting modules for revenue and stock monitoring.
• Tech Stack: C#, .NET, WinForms,, SQL Server, LINQ, Git &Github
GitHub: ChungPr0/DotNet-Store-Manager

Independent Developer Apr 2026 - Present

Multi-functional Discord Bot (Java)

• Developed an event-driven automation bot utilizing JDA (Java Discord API) via WebSocket connections.
• Handled asynchronous tasks for automated moderation, text/voice channel management, and custom interactions.
• Packaged dependencies with Maven and automated continuous 24/7 deployment on an Ubuntu Linux VPS using Docker.
• Tech Stack: Java 17, JDA, Maven, Docker, CI/CD, Linux.
